

Abstract. A general expression is given for the quintic Lovelock tensor as well as for the coefficient of the quintic Lovelock Lagrangian in terms of the Riemann-Christoffel and Ricci curvature tensors and the Riemann curvature scalar for n -dimensional differentiable manifolds having a general linear connection.

PACS numbers: 02.40.-k, 04.20.Cv, 04.20.Fy

This letter provides the interested reader with a general expression for the quintic Lovelock tensor $G_{(5)a}^b$ in terms of the Riemann-Christoffel curvature tensor¹

$$R_{abc}^d \equiv 2 (\partial_{[a} \Gamma_{b]c}^d + \Gamma_{[a|e|}^d \Gamma_{b]c}^e + \Omega_{a|b}^e \Gamma_{e|c}^d), \quad (1)$$

the Ricci curvature tensor

$$R_a^b \equiv R_{ca}^{bc} = -R_{ac}^{bc} = -R_{ca}^{cb} + 2 (\nabla_{[c} Q_{a]}^{bc} + S_{ca}^d Q_d^{bc}), \quad (2)$$

and the Riemann curvature scalar

$$R \equiv R_a^a = R_{ba}^{ab} = -R_{ab}^{ab} = -R_{ba}^{ba} \quad (3)$$

using anholonomic coordinates for n -dimensional differentiable manifolds having a general linear connection, where ∂_a is the Pfaffian derivative, Γ_a^b the connection coefficient, Ω_a^b the object of anholonomy, Q_a^{bc} the non-metricity tensor, and S_{ab}^c the torsion tensor.

A general expression for the coefficient $L_{(5)}$ of the quintic Lovelock Lagrangian appears in the appendix.

Suchlike expressions for $G_{(5)a}^b$ and $L_{(5)}$ seem not to have appeared in the open literature hitherto, although isomers of the concomitants belonging to the 73rd and 80th terms of $L_{(5)}$ per Eq. (7) below have appeared in Zanon.²

In accordance with various general definitions given by Müller-Hoissen³ and Verwimp,⁴ the quintic Lovelock tensor $G_{(5)a}^b$ is given by the formula

$$G_{(5)a}^b = \frac{11!}{2^6 \times 5} \delta_{[a}^b R_{i_1 i_2}^{i_1 i_2} R_{i_3 i_4}^{i_3 i_4} R_{i_5 i_6}^{i_5 i_6} R_{i_7 i_8}^{i_7 i_8} R_{i_9 i_{10}}^{i_9 i_{10}}]^{i_9 i_{10}}, \quad (4)$$

which comprises 39,916,800 unique covariant index permutations, of which but 596—together with numerical coefficients—suffice for rendering a general expression for $G_{(5)a}^b$, the final result (after substituting contractions and re-labeling indices) being given by

$$\begin{aligned} G_{(5)a}^b = \frac{1}{10} & (-\delta_a^b R^5 + 40 \delta_a^b R^3 R^c R_c^d - 10 \delta_a^b R^3 R_{ef}^{cd} R_{cd}^{ef} - 160 \delta_a^b R^2 R_d^c R_e^d R_c^e + 240 \delta_a^b R^2 R_e^c R_f^d R_{cd}^{ef} + 240 \delta_a^b R^2 R_d^c R_f^d R_{ef}^{de} R_{ce}^{fg} + \\ & + 20 \delta_a^b R^2 R_{ef}^{cd} R_{gh}^{ef} R_{cd}^{gh} - \end{aligned}$$

For a check, note that (1) $G_{(5)a}^a = \frac{n-10}{10} L_{(5)}$ and (2) the magnitudes of the numerical coefficients of $G_{(5)a}^b$ add up to $\frac{11!}{2^6 \times 5} = \frac{1}{10} \times 1,247,400 = 124,740$.

APPENDIX. EXPRESSION FOR $L_{(5)}$

“In a certain sense $L_{(5)}$ forms a boundary, since the higher terms do not appear in the ‘physically interesting’ (supergravity, superstrings) dimensions < 12 .”
— Müller-Hoissen, F., [personal communication], tr. by author.

The coefficient $L_{(5)}$ of the quintic Lovelock Lagrangian is given by the formula

$$L_{(5)} = \frac{10!}{2^5} R_{[i_1 i_2} R_{i_3 i_4} R_{i_5 i_6} R_{i_7 i_8} R_{i_9 i_{10}]}, \quad (6)$$

which comprises 3,628,800 unique covariant index permutations, of which but 85—together with numerical coefficients—suffice for rendering a general expression for $L_{(5)}$, the final result (after substituting contractions and re-labeling indices) being given by

$$\begin{aligned}

\end{aligned}$$

For a check, note that the magnitudes of the numerical coefficients of $L_{(5)}$ add up to $\frac{10!}{2^5} = 113,400$.
